General Information:

The AJC-SPIA Poll was conducted September 27 to October 6, 2020 and included a total of 1,106 likely general election voters in Georgia. Likely voters were respondents who had voted in the 2020 June primaries and/or the 2018 general election and/or the 2016 general election, who indicated they were currently registered to vote in Georgia, and were *definitely* or *probably* going to vote in the 2020 November election. The survey was administered by the School of Public and International Affairs Survey Research Center at the University of Georgia. Interviews were conducted in English. A dual-frame statewide random sample consisting of approximately 70% cell phone numbers and 30% landline numbers was obtained through L2 (L2 is a sampling vendor that maintains a database constructed from state voter registration lists. Through commercial sources, phone numbers have been appended to the individual records (registrants) that make up these lists). The survey results were weighted using iterative proportional raking in order to ensure the sample was representative of the 2020 general electorate in terms of race, sex, age, and education. The calculated margin of error for the total sample is +/-2.9 points at the 95% confidence level. This would mean that if 50% of respondents indicate a topline view on an issue, we can be 95% confident that the population's view on that issue is somewhere between 52.9% and 47.1%. The margin of error including design effects is +/-4.0 points at the 95% confidence level.¹

Verification:

Before results for any head-to-head election match-up are released to the AJC, they are corroborated by an outside entity. More specifically, the outside entity replicates our reported results for any head-to-head races and confirms they are the same. For this survey, the results we report for the 2020 general election were verified by the Wason Center for Public Policy at Christopher Newport University in Newport News, VA.

Statistical Calculations:²

President: The difference between Trump's estimated vote share and Biden's estimated vote share, at 1.1%, is not statistically significant. In plain English, the presidential race is currently a statistical tie.

U.S. Senate: The difference between Perdue's estimated vote share and Ossoff's estimated vote share, at 7.5%, is statistically significant. Perdue is currently ahead of Ossoff.

U.S. Senate Special: Warnock currently leads this race with 27.7%. The difference between Warnock's vote (27.7%) share and Loeffler's (21.8%) or Collins' (21.2%) vote share is statistically

¹AAPOR Design Effect formula: $\sqrt{[1+(\text{standard deviation of the weights}/\text{mean of the weights})^2]}$

²The formula used to determine if the difference in vote percentages between candidates is statistically significant is derived from Alastair J. Scott and George A.F. Seber. 1983. "Difference of Proportions from the Same Survey." *The American Statistician* 37(4): 319-320.

significant. Warnock is currently ahead of both Loeffler and Collins. The difference between Loeffler and Collins vote share, at 0.6%, is not statistically significant. Loeffler and Collins are statistically tied.
